

## About Me

### Professional Life

I am a ServiceNow Architect with 5+ years of experience designing and building scalable, secure solutions for complex enterprise environments. I've led the development of custom applications using App Engine Studio, with a strong emphasis on clean architecture, reusability, and long-term maintainability.

Alongside my professional work, I am currently a graduate student at Johns Hopkins University, pursuing an M.S. in Artificial Intelligence. I have extensive experience with Python, JavaScript, HTML, and CSS, and I'm particularly interested in where enterprise platforms intersect with automation, AI, and intelligent systems.

### Personal Life

I live in Louisville, KY, with my spouse, two teenagers, and our dog. When I'm not working, you'll usually find me playing video games or at a stand-up comedy show.

# My Projects

A collection of my work.

All Projects

Web Development

Data Science

Machine Learning

## Personal Website

A personal website created to document and present an individual's experiences, skills, and professional journey. The site provides an organized and accessible way for visitors to learn more about the individual's background and areas of focus.

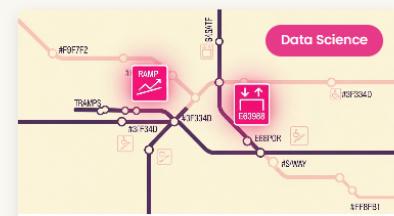

Python   Flask   HTML   CSS

## Space Domain Awareness

Checks for potential satellite collisions and sends an alert when two satellites are at risk of collision.

Python

## WMATA Accessibility

Connects to the Washington Metro subway API and creates a visual map of where there are accessibility issues (ramps, escalators, etc)

Python   GeoJSON   MapBox

## Get In Touch
